Manuel Jimenez

AI ENGINEER • SENIOR BACKEND DEVELOPER

manuel28042005@gmail.com | linkedin.com/in/manueljimenezlopez | github.com/manuel-jimenez10 | manueljimenez.vercel.app | LATAM (Remote)

PROFESSIONAL SUMMARY

AI Engineer and backend developer shipping Python and Node.js services since 2022. Builds multi-agent LLM systems (LangGraph, CrewAI, RAG) that run in production, along with the APIs, async workers and WhatsApp/CRM integrations they depend on.

CORE COMPETENCIES

Multi-Agent LLM Systems | RAG & Semantic Search | Python / FastAPI | Node.js / NestJS | Celery & Redis Workers | Meta WhatsApp Business API

WORK EXPERIENCE

SellEasy — Dec 2025 - Present

AI Engineer • LLM Systems & Multi-Agent Specialist · Medellin, Colombia (Remote)

- Built a multi-agent system in Python (LangGraph, CrewAI, RAG) that handles e-commerce sales and support conversations end to end, with no human in the loop. Response latency dropped 32%.
- Designed the retrieval layer behind those agents: embeddings stored in Qdrant, semantic search and prompt caching, with token spend and cost per inference tracked in Helicone.
- Ad-ops agents running on the Meta, TikTok and Google Ads APIs now handle campaign orchestration and budget tracking; the marketing team spends 23% less time managing ads.
- Led the technical and compliance work for Meta Certified Tech Provider accreditation, which put merchant onboarding and WhatsApp API setup for every tenant in one place.

Netcare IT — Jun 2024 - Sep 2026

Senior Backend Engineer • AI Integrations & API Specialist · Cabo San Lucas, Mexico (Remote)

- Connected the Meta WhatsApp Business Cloud API to the company CRM (EspoCRM) asynchronously, so quotes and pre-invoices go out from the CRM itself. Admin workload fell 21%.
- Wrote high-concurrency REST endpoints and WebSocket channels for centralized two-way omnichannel messaging; the sales team's output rose 22%.
- Python background workers (Celery) with Redis caching process the high-volume message queues, and the system holds up at peak load.
- Kept Mailchimp in sync with the CRM through an event-driven job that mirrors every contact create, edit and delete.

Seagloo — Jul 2022 - Aug 2024

Backend Developer · Buenos Aires, Argentina (Remote)

- Developed an AI emergency detection engine with real-time geolocation that reports into 911 dispatch networks. Alerts now reach dispatch 17% faster.
- Built and evaluated the ChatGPT-4o pipeline that classifies critical incidents, with a prompt-validation layer in front of the model: classification accuracy went up 20%.
- Coordinated asynchronous communication and alert processing between the surveillance system's AI agents, written in Python over ZeroMQ.
- Containerized the multi-service backend with Docker Compose, which cut environment drift between dev, staging and production by 15%.

PROJECTS

Cobrix - AI-Powered Debt Collection via WhatsApp

WhatsApp collections app for Mexican SMBs. A rule-based 0-100 debtor priority score decides who to contact first, and a Gemini assistant drafts reminders and detects payment promises, with Zod-validated outputs and rule-based fallbacks.

TypeScript, React, Hono, Vercel AI SDK, Gemini, Supabase

Evento Maiawa - NFC & Voice Event Platform (built at SellEasy)

Device API that NFC readers call on every tap at an in-person event, returning an action code and a pre-generated ElevenLabs voice clue. Tuned the audio to shrink a 10-second clip from ~213 KB to ~54 KB of base64.

TypeScript, Next.js, Supabase, ElevenLabs API, NFC hardware

Hivara AI Collaboration - AI Engineer

Redesigned a 100-node WhatsApp dealership flow on a Python LLM engine: false terminations went from 14/18 to 0/18. Traced worker race conditions that led to core engine fixes.

Python, LangGraph, Celery, RAG

EDUCATION

Computer Engineering (Ingeniería Informática) Universidad Rafael Belloso Chacín — 01/2025

Full Stack Development Henry — 06/2024 - 09/2024

SKILLS

AI / LLM: LangGraph, LangChain, CrewAI, RAG, Embeddings, MCP, OpenAI, Anthropic (Claude), Gemini, ElevenLabs

Python & Backend: Python, FastAPI, Celery, asyncio, Node.js, NestJS, TypeScript, WebSockets, GraphQL, Event-Driven Architecture

Data & Observability: PostgreSQL, Redis, Qdrant, pgVector, Supabase, Helicone, Grafana, Prometheus, OpenTelemetry

Cloud & Integrations: Docker, CI/CD, Render, AWS, Google Cloud (Vertex AI), WhatsApp Business API, EspoCRM, Twilio, Mailchimp API

Languages: Spanish (Native), English (B2 - Upper-intermediate)
